                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (II) encoded by them are used for diagnosing the presence or activity of Corynabacterium diphtheriae in a subject. (I), (II) (III) or host cells containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing them are used to map genomes of organisms related to containing the groundling SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        69 AQIDKWHRRRVIEPIDMDAYRQFLTBIGYLLPEPDDFTITTSGVDAEITTTAGPOLVVPV 128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and carbon are involved in carbon metabolism and carbon are involved in carbon metabolism and carboy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a uncleotide, a seturated or unsaturated fauty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a coffactor, a polyketide, or an enzyme. The presence of (I) or SMP proteins (III) encoded by them are used for diagnosing the presence or activity of corprebactorium diphtheriae in a subject. (I), (II), (III) or host cells containing them are used to map genomes of corganisms related to c. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required for the function, in medulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production in a cell (i.e. ATP, NADPH).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120 AANARWGSLYDALYGTNAIPETDGAEKGKEYNPVRGQKVIEWGREFLDSVVPLDGASHAD 179

                                                                                                         The present invention relates to the isolation of Mycobacterium tuberculosis antigen polypeptides (e.g. TD224) and the mucleic acids encoding them. The invention describes compounds and methods for the diagnosis of tuberculosis or for inducing protective immunity against tuberculosis. The compounds comprise at least one immunogenic portion of one or more Mycobacterium proteins and nucleic acid molecules encoding such polypeptides. The Mycobacterium proteins and nucleic acid molecules encoding them can be used in diagnostic kits for the detection of Mycobacterium infection in patients and biological samples. The compounds of the invention and antibodies directed against the Mycobacterium proteins may be used in vaccines for immunisation against Mycobacterium infections. The mucleic acids encoding the Mycobacterium proteins may be used in service acids encoding the Mycobacterium proteins may be used in gene therapy. The present sequence represents Mycobacterium polypeptide for MO-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ELDMLLTAGERISNALVAMAIESLGAHARSFTGSQAGVITTGTHGNAKIIDVTPGRLQTA 124

                                                                                                                                                                                                                                                                                                                                                                                         AAQ72693 encodes AAR63567 Brevibacterium flavum feedback inhibition release agpartokinase, it was used in the construction of a plasmid. The plasmid was used to transform Corynebacterium cells, where the expression of AAQ72693 resulted in incresed L-lysine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   579 RATIEQLLTIP-----LAKELAMAPDEIREEVDNNCQSILGYVVRWVDQ----

The plasmid was used to transform Corynebacterium cells, where the expression of AAQ72695 resulted in incresed L-lysine production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Feedback inhibition release aspartokinase, Brevibacterium flavum,
Corynebacterium, L-lysine production.

The specification describes Coryneform bacteria which produce chemical compounds, which instead of a single copy of an open reading frame (ORF), gene or allale maturally present at a desired locus have at least two copies of the ORF, gene or allale, preferably in tandem arrangement. The modified bacteria are is useful for producing chemical compounds including Leamino acids, vitamins, nucleosides and nucleotides. The present sequence is encoded by a lysc gene, and represents an aspartate kinase carrying the T3111 mutation. Tandem duplications of the lysc gene are used to construct the bacteria of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   809 ELDMLLTAGERISNALVAMAIESLGAHARSFTGSQAGVITTGTHGNAKIIDVTPGRLQTA 868

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a modified aspartokinase from Corynebacterium glutamicum (e.g., AAB25607) and to DNA encoding the modified aspartokinase (e.g., AAC64119). The aspartokinase of the invention is modified to remove its sensitivity to feedback inhibition by L-threonine or L-lysine. This is achieved by substituting the wild-type Thr 311 with any other amino acid; for example, in AAB29607 Thr 311 is substituted by Ile. The invention also relates to expression vectors and host coryneform bacteria containing the modified DNA, and to the preparation of L-lysine using coryneform bacteria transformed with the modified aspartokinase-encoding DNA. Culturing coryneform bacteria transformed with the modified aspartokinase DNA of the invention provides efficient production of L-lysine. The present sequence represents a modified Corynebacterium glutamicum aspartokinase of the invention, T3111.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                        6061

Patent No. 6551795
GENERAL INFORMATION:
APPLICATION: MARC J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PRILING DATE: 1998-02-18
PRIOR PRILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 22524
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               669 LERMAPLVDRONAGDVAYRPMAPNFDDSIAFLAAQELILSGAQQPNGYTEPILHRRRREF 728

Patent No. 6583266
GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR TITLE OF INVENTION: DAGNOSTICS AND THERAPEUTICS
INTREE OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
ADDRESSES: WOLF, GREENFIELD & SACKS, P.C.
ATREET: ______
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1043
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 'n

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               989 IKDVPMEDPILIGVAHDRSEAKVTIVGLPDIPGYAAKVFRAVA------RRRRQHR 1038

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                      US-09-688-672A-52
